

SHIVAM JADHAV

Denton, TX | (940) 843-9864 | jadhavshivam0228@gmail.com | [linkedin.com/in/shivamjadhav](https://www.linkedin.com/in/shivamjadhav) | shivamjadhav.com

SUMMARY

Detail-oriented **Software Engineer & AI Researcher** with 7+ years of experience in **full-stack software engineering**. Skilled in **Java, spring Boot, JavaScript, and React.js**, with strong expertise in **server-side development, web application engineering, and cloud infrastructure (AWS, Azure)**. Proven track record in developing scalable, reliable systems using **microservices, CI/CD, Kubernetes**, and **cloud-native architectures**. Passionate about crafting user-focused technology that drives innovation, performance, and seamless digital experiences.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript (ES6+), TypeScript, SQL, Bash

Frameworks & Tools: React.js, Node.js, Express.js, Spring Boot, .NET Core, REST APIs

Web Technologies: HTML5, CSS3, Responsive Design, Figma, JSON, WebSockets

Cloud & DevOps: AWS, GCP, Azure, Docker, Kubernetes, Jenkins, GitLab CI/CD, Nginx, Linux System Administration

Databases: PostgreSQL, MongoDB, SQL Server, Redis

AI & Machine Learning: LLM Evaluation, Model Validation, Prompt Engineering, IBM Granite, RAG Models, Data Pipelines

Software Practices: Agile Development, Version Control (Git), System Design

Certifications: [Microsoft Certified: Azure Fundamentals](#), [AI MOVE Fellow – AI Trainer](#), [Meta Certified Front-End Developer](#)

PROFESSIONAL EXPERIENCE

Software Engineer & AI Trainer / Consultant

University of North Texas – College of Visual Arts & Design — Denton, TX

Sep 2025 – Present

- Architecting **cloud-native full-stack systems** using Java, React.js, spring boot, SQL, and Azure to improve campus technology infrastructure and reliability.
- Developed a **Digital Signage Management System** with RESTful APIs and microservices deployed on **Docker and Kubernetes**, saving \$40K annually.
- Implemented **real-time monitoring and system status dashboards** using WebSockets, TCP sockets, and server-side logic for 24/7 uptime tracking.

AI Research Fellow (MOVE Fellowship – Project Canary)

Handshake AI Solutions, LLC — Remote

Sep 2025 – Oct 2025

- Conducted **LLM fine-tuning and model validation** using prompt engineering and adversarial testing for high-accuracy AI systems.
- Reviewed and annotated AI-generated outputs to improve large language model (LLM) accuracy and relevance. Curated and validated datasets while adapting to evolving task guidelines and project needs. Collaborated with technical teams to refine annotation tools and workflows for higher data quality.

Software Development Engineer Intern

ISN Software Corporation — Dallas, TX

Jun 2025 – Aug 2025

- Built a full-stack Health Check System (.NET, React.js, Azure) to monitor 100+ services, boosting uptime by 30%.
- Developed dashboards, logging, and automated alerts, cutting support tickets by 5%.
- Optimized SQL and cron jobs for subscription notifications, supporting 85K+ contractors and 850 clients.

Software Engineer (R&D)

University of North Texas — Denton, TX

Sep 2023 – May 2025

- Designed and deployed a **Kubernetes-based enterprise signage system**, applying **SRE** principles for continuous availability.
- Developed microservices and front-end interfaces using **React.js, Node.js, and Spring Boot**, supporting real-time content management.
- Built **CI/CD pipelines** with Jenkins and Docker for automated builds, testing, and cloud deployments on AWS and Azure.
- Optimized system architecture to support 50+ concurrent updates while maintaining high throughput and minimal latency.

Full Stack Engineer

Cyrrup Solutions (Startup) — Hyderabad, India

Jan 2021 – Aug 2023

- Engineered IoT-driven **backend services in java spring boot and Python** deployed on **GCP**, reducing fuel theft and improving fleet analytics accuracy by 40%.
- Built **real-time data pipelines and APIs** supporting telemetry, ML event detection, and predictive analytics.
- Implemented **microservice communication and cloud orchestration** using Docker and Kubernetes for high-availability deployments.

Full Stack Engineer

Ark Traders — Hyderabad, India

Jan 2019 – Jan 2021

- Designed and maintained **full-stack enterprise applications** serving over 100K users using **Java (Spring Boot)** and **React.js**.
- Developed **REST APIs, caching layers (Redis), and SQL queries** for high-traffic transaction systems.
- Integrated AI-driven features (e.g., recommendations, analytics) and automated deployment pipelines in **AWS** and **Docker** environments.

PROJECTS

Vehicle Black Box – Fleet Management Solution | MEVN Stack (MongoDB, Express.js, Vue.js, spring boot, Python, GCP, TCP/IP)

- Built a full-stack Fleet Management System with vehicle-driver mapping, trip history, geofencing, and live tracking using Google Maps/OpenStreetMap.
- Developed a Python-based multithreaded DAC Server using Socket.IO, TCP/IP, Redis, and MongoDB for real-time IoT data streaming.
- Automated report generation and scheduling with Python scripts and cron jobs to improve operational visibility.
- Implemented diesel theft alerts and route analytics, helping fleet owners reduce fuel theft by 60% and enhance route efficiency.

Ark CRM Trading Platform | Java, Spring Boot, spring boot, React.js, PostgreSQL, AWS

- Engineered a multi-tenant CRM and trading platform supporting 100K+ users, enabling trading, withdrawals, deposits, and loan requests.
- Developed Java-based backend controllers for user management, authentication, and 30+ financial reports with live KPIs.
- Built a MERN front end using advanced React patterns (Context API, custom hooks) for admin and customer dashboards.
- Empowered admins with comprehensive analytics on active accounts, total balances, and performance trends.
- [View Project](#)

Digital Signage Management System | MERN Stack (React.js, Node.js, MongoDB, Kubernetes, Jenkins, redhat os, Linux)

- Created a centralized signage content management system for asset uploads, playlist creation, scheduling, and device control.
- Implemented microservices with Kubernetes orchestration and CI/CD pipelines via Jenkins for scalability and reliability.
- Developed role-based dashboards (Admin, Standard, Asset Manager) with granular control over users and signage devices.
- Deployed on RAID-configured DELL EMC R740 servers and custom Raspberry Pi OS, saving \$40K annually in licensing and infrastructure costs. [View Project](#), [RAID on DELL EMC R740](#), [Custom Raspberry Pi OS](#)

EDUCATION

Master of Science in Computer Science

University of North Texas — Denton, TX | *Expected May 2025*

Specializations: Cloud Computing, Distributed Systems, AI/LLMs, and Inter-GPU Communication, GPA: 3.72

ADDITIONAL HIGHLIGHTS

- **Leadership:** Mentored early-career engineers and student developers in software architecture, agile development, and DevOps ,Jenkins pipelines.
- **Innovation:** Developed automation and reliability tools improving system uptime by 40% across university infrastructure.
- **Collaboration:** Partnered with cross-functional teams on **infrastructure services, corporate systems engineering**, and **enterprise technology** solutions supporting 100K+ users.
